Software engineer building scalable full-stack applications (TypeScript, Python, Go) and test automation pipelines. Engineering enterprise QA workflows at Cognizant, and private offline AI knowledge graphs.

Experience

Programmer Analyst, Cognizant
Aug 2026 – Present, Pune, India

- Lead test automation architecture and CI/CD quality pipelines in Jenkins, cutting regression cycle time and defect escapes by 35%.
- Drive quality engineering across Agile releases, conducting root-cause analyses and collaborating with engineering teams to unblock production deliverables.

Programmer Analyst Trainee, Cognizant
Aug 2025 – Aug 2026, Pune, India

- Automated 120+ end-to-end regression test cases across cross-system workflows using Python, Selenium, and Robot Framework.
- Orchestrated automated test jobs in Jenkins and locally, streaming test results, defect metrics, and logs to Jira and qTest.
- Participated in client status meetings and daily standups, ensuring test scripting progress met strict quality milestones.

Software Engineering Intern, Cognizant
Mar 2025 – Aug 2025, Pune, India

- Built behavior-driven test frameworks using Java, Selenium, Cucumber BDD, and Gherkin with Log4j logging for automated test verification.
- Spearheaded a 5-member QA team to automate a civic District Portal, testing complex workflows including event booking and dynamic seat reservation.
- Managed Git branching, peer code reviews, and test case distribution, accelerating sprint delivery turnaround by 25%.

Projects

Persona.ai, 2025 – github.com/J0seph-Mart1n/PersonaLocalApp
Next.js, Electron, Neo4j, Ollama, Tailwind CSS

- Architected an offline desktop application in Next.js and Electron that extracts, analyzes, and visualizes personal psychological knowledge graphs.
- Integrated local Ollama LLM inference for zero-cloud privacy, structuring natural language interactions into queryable Neo4j graph nodes.

SELAH, 2026 – github.com/J0seph-Mart1n/SELAH_2026
Next.js 16, React 19, TypeScript, Cloud Firestore, Tailwind CSS, WebGL, GSAP

- Architected a full-stack festival platform featuring a 4-step registration wizard with dynamic roster validation, tiered pricing logic, and UPI QR payments, backed by Cloud Firestore.
- Built a secure admin analytics dashboard with session-based authentication and CSV reporting, paired with an interactive WebGL 3D cloth physics simulation.

Vitality, 2025 – github.com/J0seph-Mart1n/Vitality
React Native, Expo, Go, MongoDB, Firebase, LLaMA

- Shipped an AI nutrition tracking app parsing food labels into structured nutritional data using multimodal vision models, cutting meal logging time by 80%.
- Engineered a high-throughput Go backend handling REST API requests with sub-50ms latency, utilizing Firebase Auth and MongoDB for secure sync.

Skills

Languages: TypeScript, JavaScript, Python, Go, Java, SQL, HTML, CSS

Frontend: Next.js, React, React Native, Expo, Vue 3, Tailwind CSS, Electron

Backend & APIs: Node.js, Express, FastAPI, REST, JWT, Zod, Prisma ORM

Databases & Infra: PostgreSQL, MongoDB, Neo4j, SQLite, Docker, Firebase, Git, Linux

Testing & QA: Selenium, Robot Framework, Cucumber BDD, Gherkin, Jenkins, Jira, qTest, Log4j

AI & LLM Tools: Ollama, LLaMA, Multimodal Vision Models, Prompt Engineering, Semantic Search

Education

AISSMS College of Engineering, Pune, India
B.E. Computer Engineering, 2021 – 2025

- Co-Head of Programming at CIPHERS Club; specialized in Backend Systems, Machine Learning, and Automation.
